

## Location Professional Management of Location Data

### OVERVIEW

#### Benefits

- Fast and targeted navigation in planning information
- Simplified management of location data
- Utility-specific positioning of location data

#### System requirements

Smallworld GIS, Version 4

Location Professional simplifies the process of updating location data and allows quick and systematic navigation in the database. Thus, Location Professional is an important basis for map queries.

By means of the objects "street" and "house number", the user navigates to the desired position in the GIS. Location Professional enables the street and the house number to

be positioned independently for each theme (e.g. gas, water, electricity, etc.) on maps and plans. Location data such as city, zip-code etc. can be added as attributes of the object "street"

In addition, texts can be different and have different geometry on the site map and the general map.

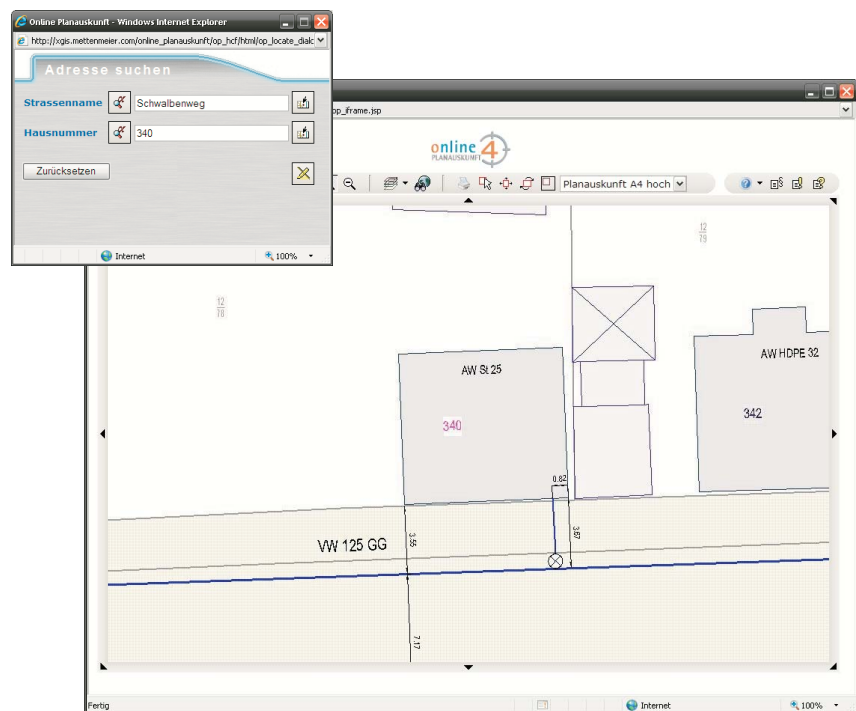

Authorized Partner  
GE Energy

#### Smallworld Solutions by Mettenmeier

As an Authorized Partner of GE Energy, Mettenmeier has been developing Smallworld GIS applications for over 15 years. Every day, thousands of GIS users profit from enhanced functionality and mature solutions delivered by Mettenmeier.
