

## Multi-Map Editor

### Improved Map Grid Output

#### OVERVIEW

##### Benefits

- Intelligent extension of the basic Map Grid Module in Smallworld GIS
- Configuration, loading, saving and outputting map series of sheet objects
- Generation of map sheets with regard to neighbouring meridional zones

##### System requirements

Smallworld GIS, Version 4

Printing map sheet sections plays an important role in the output of graphical data from Smallworld GIS.

The basic Smallworld module enables map sheet objects to be captured and printed separately, however only for one map sheet at a time. Moreover, printing theme-related map sheet sections (gas, water, electricity etc.) requires an object class visibility to be loaded via the object class menu.

Multi-Map Editor is a crucial extension of the map grid module and simplifies this task: Map series can be configured, loaded and printed for each theme.

Beside standard map sheets (1:1000, 1:500, 1:250), any given map section can be produced and processed. Moreover, Multi-Map Editor enables map sheets to be generated and used according to their meridian strip. All these features make Multi-Map Editor an important tool for producing map grid plots.

Authorized Partner  
GE Energy

#### Smallworld Solutions by Mettenmeier

As an Authorized Partner of GE Energy, Mettenmeier has been developing Smallworld GIS applications for over 15 years.

Every day, thousands of GIS users profit from enhanced functionality and mature solutions delivered by Mettenmeier.

Mettenmeier GmbH Utility Solutions  
Klingenderstr. 10-14  
33100 Paderborn, Germany
